## Overview

What is a pressurized explosion proof cabinet?

Intertec's pressurized explosion proof (Ex p) cabinets are constructed from GRP (glass reinforced polyester) composite materials. These materials are highly resistant to corrosion and have a similar strength to stainless steel, but are about 75 percent lighter, making them ideal for equipment containment and personnel shelter applications.

Are explosion-proof cabinets safe to use?

Explosion-proof cabinets can protect the safety and health of the working environment and the lives and properties of employees when used properly. They are safe as long as they are maintained safely.

Is expresse a flameproof enclosure?

EXpressure is certified as an "Ex d flameproof enclosure." Therefore, it is suitable for applications in Zone 1 and Zone 2 hazardous areas. The advanced design enables fast project engineering and production of explosion-protected control panels and distribution boards. The complete control equipment is easily built in a single cabinet.

How do expresse cabinets work?

REINVENTED! The new EXpressure cabinets are revolutionising the science of explosion protection. They are equipped with grids made from stainless steel wire mesh in the walls through which pressure flows in the event of an explosion. The wire mesh absorbs the heat energy and the pressure dissipates.
