Factory price bus tie breaker in Brunei

Overview

What is a bus tie breaker?

In electrical distribution systems, a bus tie breaker is used to connect two sections of an electrical bus serving different power sources. Bus tie breakers are usually open, keeping the two sections separate. When one power source fails, the tie breaker can be closed to maintain service through the section, avoiding a planned service outage.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents. In the context of maintenance, tie breakers offer significant advantages.

What is a bus tie switchgear?

Product Overview□The Bus Tie Switchgear is a critical component in medium-voltage (MV) power distribution systems, designed to interconnect and isolate multiple busbar sections. Rated for 10KV (IEC) to 15KV (ANSI) applications, it ensures load balancing, enhanced power continuity, and rapid system reconfiguration during faults or maintenance.

Why should a tie breaker be separated when not in use?

Keeping the two sections separated when not in use is important for several reasons. Firstly, it allows for redundancy in the system. If one power source fails, the tie breaker can be closed to bring in the second power source to supply the entire load. This ensures that there is no disruption to the critical load.

Factory price bus tie breaker in Brunei

Highvoltage Battery

IE , Intan Electric Company

Intan Electric Company Sdn, Bhd. is a company that has been long taking on the challenge of helping Brunei attains its aim of sustainable development by providing comprehensive range ...
