

EQACC SOLAR

Financing Scheme for a 30kW Mobile Energy Storage Container in Canberra

Overview

What is the capacity investment scheme?

The Capacity Investment Scheme (CIS) is an Australian Government revenue underwriting scheme to accelerate investment in: renewable energy generation (generation), such as wind and solar; clean dispatchable capacity (dispatchable), such as battery storage. The scheme provides a long-term revenue safety net that decreases financial risk for investors.

How much will Australia's CIS invest in solar & wind technology?

According to Australia's Department of Climate Change, Energy, the Environment and Water (DCCEEW), the uplift in the scheme's capacity will enable the CIS to support investments of approximately A\$21 billion in storage capacity and A \$52 billion in solar and wind technologies. In a statement announcing the increase, the DCCEEW said:.

Which battery energy storage projects are winning bids?

The winning bids include several battery energy storage systems (BESS) exceeding 500MWh in capacity, with at least two projects reaching the 1GWh threshold. The government has released the complete list of 16 successful projects (below). The projects range from 100MW to 450MW, with storage durations between 2 and 4 hours.

What is a capacity investment scheme agreement (CISA)?

The successful projects will enter into a Capacity Investment Scheme Agreement (CISA), which provides a revenue safety net through an underwriting approach. This financial structure provides successful projects with a floor price for capacity while capping potential windfall profits during high-price events.
