

# Fire protection of solar container energy storage systems

IP65/IP55 OUTDOOR CABINET

IP54/55

OUTDOOR ENERGY STORAGE CABINET

OUTDOOR BATTERY CABINET

## Overview

---

Are battery energy storage systems a fire hazard mitigation strategy?

The challenges of providing effective fire and explosion hazard mitigation strategies for Battery Energy Storage Systems (BESS) are receiving appreciable attention, given that renewable energy production has evolved significantly in recent years and is projected to account for 80% of new power generation capacity in 2030 (WEO, 2023).

Are energy storage systems required in the 2015 NFPA 1?

While the 2015 versions of the IFC and NFPA 1 do contain some requirements for energy storage systems, they are few compared to the 2018 and 2021 versions. The ESS requirements in the 2018 version, while certainly more restrictive than the 2015 version, are relatively modest.

Are there any problems with energy storage?

There have also been issues in the U.S. residential energy storage sector. For example, after five reported fires stemming from its RESU10 battery units, LG Chem issued product recalls in December of 2020 and again in August 2021. According to the Consumer Product Safety Commission, these fires resulted in property damage and one injury.

What happened to the solar-plus-storage industry?

Unfortunately, as the solar-plus-storage industry has quickly ramped up to meet the increased demand, some notable events have occurred, including fires caused by battery cell failures and even a high-profile explosion.
