Flywheel energy storage motor characteristics

Overview

How does a flywheel energy storage system work?

Flywheel Energy Storage Systems (FESS) rely on a mechanical working principle: An electric motor is used to spin a rotor of high inertia up to 20,000-50,000 rpm. Electrical energy is thus converted to kinetic energy for storage. For discharging, the motor acts as a generator, braking the rotor to produce electricity.

How much energy can a flywheel store?

The small energy storage composite flywheel of American company Powerthu can operate at 53000 rpm and store 0.53 kWh of energy . The superconducting flywheel energy storage system developed by the Japan Railway Technology Research Institute has a rotational speed of 6000 rpm and a single unit energy storage capacity of 100 kW·h.

What is a flywheel energy storage unit?

The German company Piller has launched a flywheel energy storage unit for dynamic UPS power systems, with a power of 3 MW and energy storage of 60 MJ. It uses a high-quality metal flywheel and a high-power synchronous excitation motor.

What is the circuit topology of a flywheel energy storage system?

Figure 4.2 shows the main circuit topology of the flywheel energy storage system based on the Back-Back dual PWM converter, which consists of a grid-side LCL filter, a back-to-back dual PWM converter, a permanent magnet synchronous motor, a flywheel rotor, etc.

 Efficient Higher Revenue

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 100% DC Input Overvoltage
- Max. PV Input Current 15A, Compatible with High Power Modules

 Intelligent Simple O&M

- IP65 Protection Degree: support outdoor installation
- Smart 1V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

 Flexible Abundant Configuration

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 Units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
