## Overview

---

How much do solar panels cost in 2024?

By 2010, prices had dropped to approximately \$7.50 per watt, and since then, the decline has been even steeper. In 2024, the average cost of solar panels is around \$1 per watt, a monumental reduction that has revolutionized the solar industry. The primary factors contributing to this decline in cost include:

Are solar panels a good investment in 2025?

Government Incentives: Policies, tax credits, and subsidies have played a major role in reducing the effective cost of solar installations for consumers and encouraging widespread adoption. For homeowners considering residential solar panels in 2025, the cost is more affordable than ever.

Will solar module prices increase in the next six months?

Solar module prices are expected to increase significantly from current levels in the next six months, according to Yana Hryshko, head of Solar Supply Chain Research for Wood Mackenzie. "Prices have to increase, as the Chinese solar manufacturing industry is going to do everything to make this happen," she told pv magazine.

Will the global solar PV market grow in 2025?

Despite these headwinds, the global solar PV market is still expected to grow by 10% in 2025, reaching 655 GW under the Medium Scenario (see Fig. 4). This would mark a continuation of the deceleration trend following the extraordinary 85% growth in 2023 and the more moderate 33% in 2024.
