

EQACC SOLAR

Havana Solar Container Corrosion-Resistant Type

Overview

Which Alloy owes the best corrosion resistance in solar salt?

Dorcheh et al. studied the corrosion behavior of ferritic steel, austenitic steel and Inconel625 alloy in solar salt at 600 °C, drawing a conclusion that Inconel625 alloy owed the best corrosion resistance.

Why is corrosion resistance important for macro packaging?

For macro packaging, ensuring the corrosion resistance of packaging materials in the TES system has become its main problem, because it is not only related to the safety of food in the transportation process but also related to the long-term use and complete function of the entire energy storage system , .

Can multi-shell microencapsulated PCM be used for high-temperature energy storage?

Similarly, Sheng et al. reported the synthesis of multi-shell microencapsulated PCM (MEPCM) composed of Al-25%wt Si core and Al₂O₃, and the results showed that the MEPCM prepared by them could be used for high-temperature energy storage of solar thermal power generation.

What are the characteristics of tp347h and haynes230 corrosion layers?

The characteristics of the corrosion layers varying among different materials due to differing corrosion rates. The corrosion layers on the surfaces of TP347H and Haynes230 are observed to be more compact compared to those on Inconel625.

Havana Solar Container Corrosion-Resistant Type

Review of research progress on corrosion and anti-corrosion

...

Its application scope includes solar energy storage systems, cold chain logistics, the construction industry, and so on. However, PCM is usually encapsulated in a container, and its ...
