Helsinki Solar System Design

Overview

How to optimize solar generation in Helsinki Finland?

Assuming you can modify the tilt angle of your solar PV panels throughout the year, you can optimize your solar generation in Helsinki, Finland as follows: In Summer, set the angle of your panels to 43° facing South. In Autumn, tilt panels to 61° facing South for maximum generation.

What is the Helsinki Design System?

The Helsinki Design System is a system focused on usability and accessibility, which aims to improve the quality and consistency of City of Helsinki digital services. This results in a better user experience for everyone. All content is available under CC BY 4.0, except where otherwise stated.

Where is solar energy produced in Finland?

In Helsinki, Uusimaa, Finland (latitude: 60.1719, longitude: 24.9347), solar energy production varies significantly across different seasons. During the summer months, an average of 5.72 kWh per day per kW of installed solar can be generated, making it a suitable time for harnessing solar power.

How many solar PV locations are there in Finland?

So far, we have conducted calculations to evaluate the solar photovoltaic (PV) potential in 49 locations across Finland. This analysis provides insights into each city/location's potential for harnessing solar energy through PV installations. [Link: Solar PV potential in Finland by location](#)
