

**EQACC SOLAR**

# **High-efficiency Australian mobile energy storage container for marine applications**

## Overview

---

Available in either a 10ft, 20ft or 40ft ISO CSC container, the BESS is designed to be cost-effective, safe, easy to transport, scalable and integrated to the specific energy requirements of our clients. What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

Are fuel cells viable for maritime applications?

Key findings reveal that fuel cells must achieve operational lifespans exceeding 46,000 h to be viable for maritime applications. Additionally, reliance solely on volumetric energy density underestimates storage needs, necessitating provisions for cofferdams, ullage space, tank heels, and hydrogen conditioning areas.

Are battery-based energy storage solutions transforming modern ship propulsion?

Whether it's a new build or a refit, a hybrid or an all-electric vessel, these battery-based energy storage solutions are helping redefine modern ship propulsion. Siemens has a wealth of experience and expertise with propulsion solutions for all-electric and hybrid vessels.

## High-efficiency Australian mobile energy storage container for marine ...

---

### Containerized Energy Storage System Complete battery ...

What is containerized ESS? ABB's containerized energy storage system is a complete, self-contained battery solution for large-scale marine energy storage. The batteries ...
