Home Uninterruptible Power Supply Service

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supply (UPS) | Schneider Electric Hong Kong, China. An Uninterruptible Power Supply system provides emergency power when the main source fails, using batteries to ensure a continuous supply. It conditions incoming power, protecting equipment from fluctuations. We offer various UPS power supply types for different needs.

How does an ups work?

A UPS stores energy in internal batteries and converts it into AC power the moment your main power fails. Depending on the model, it might activate instantly (standby UPS), regulate voltage continuously (line-interactive), or offer full isolation from the power grid by double-converting energy (online UPS).

Why do you need an UPS system?

A UPS acts as both shield and lifeline—filtering out dangerous surges and keeping essential electronics running during an outage. It's an essential investment for anyone relying on computers, servers, medical equipment, or home networking gear. UPS systems have evolved far beyond bulky battery boxes.

What is a good UPS system?

1500VA+ or Online UPS: Needed for servers, high-end gaming PCs, NAS storage, or professional AV systems. LiFePO4 UPS Systems: Offer 10-year lifespan and faster charging. Higher upfront cost but better long-term value. Keep your UPS in a well-ventilated area, away from heat sources.
