Hook-type double-glass components

Overview

What are the different types of crane hooks?

Crane hooks are divided into different types according to their intended use and each is optimized for specific functions. The most common types of crane hooks and crane hook specifications are as follows: Single hooks are generally used for lifting light and medium loads. Their simple design makes them easy to install and cost-effective.

What is a crane hook made of?

The hook body is usually made of high-strength steel or alloy steel that can withstand high stress and wear. The shape and size of the hook body depend on the type of crane hook and the load capacity. Hook Point: The hook point is the tip of the crane hook that grabs the load.

What are the different types of hooks?

Note: Hook is usually equipped with a safety to prevent the disengagement of the lifting rope sling, chain or rope to which the load is attached. Hooks can be classified into single hook and hooks according to the appearance; forged and strapped hooks according to production method. Which hook to choose?

.

What is a double hook?

Double hooks, also known as two-leg hooks, feature a distinctive design with two load-bearing points. This allows loads to be lifted at two points simultaneously, which is especially useful for long or irregularly shaped items. Double hooks are commonly used in logistics, for lifting steel beams, or when handling pipes and other elongated objects.

Crane Hooks According to Their Shape
Closed and Semi-Closed Crane Hooks
Crane Hooks According to Their Manufacturing
Depending on their shape, crane hooks can be categorized into single and double. Single crane hooks are suitable for machinery with loads of up to 75 tons. They are simple and easy to use regardless of the variant. On the other hand, double crane hooks have a similar conception but offer superior bearing for heavier loads over 75 tons.
