Household off-grid solar system costs

Overview

How much does an off-grid solar system cost in 2025?

When it comes to the cost of an off-grid solar system in 2025, it really depends on a few things like the size of the system, how much energy you need, and where you live. On average, you can expect to spend anywhere from \$10,000 to \$50,000 for a fully installed system, but let's break it down to give you a better idea.

How much does an on-grid solar system cost?

On-grid systems are built to support energy needs but do not serve as your only electricity source. This means they're smaller and cost less than off-grid options. The average cost of solar panels for an on-grid, 5 kilowatt-hour (kWh) system is \$15,000-\$20,000. An off-grid system costs more than twice as much.

Does an off-grid solar system work with a large home?

Yes, off-grid systems work with any residential home, even larger ones. Off-grid systems work best for remote homes or those with limited access to utility power. Due to their size and power capacity, off-grid systems are more expensive than grid-tied solar systems.

Can you live off the grid with a solar system?

Living off the grid is no longer reserved for remote cabins or rugged survivalists. With advances in solar technology and falling equipment costs, setting up a reliable off-grid solar system has become an achievable project for homesteaders, RV travelers, and even suburban homeowners seeking energy independence.
