

# How big an inverter do I need for 12 kilowatts

## Overview

---

The rule of thumb is to size your inverter 1.25 bigger than your solar array. In some cases, you may need to use multiple inverters to meet your power needs or increase your system's voltage. How big should a solar inverter be?

To account for power losses assume an 80 percent efficiency. Your solar inverter should have a similar or slightly higher wattage rating than the DC output of your solar panels (which in this case is 4.5 kW). You can size it between 1.15 and 1.5 times larger. The rule of thumb is to size your inverter 1.25 bigger than your solar array.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How many inverters do you need for a 12 kW solar system?

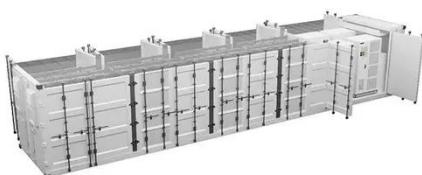

Inverter: one or two inverters of a combined 10 kW-15 kW A 12 kW solar installation in a farm near Berlin utilized a 10 kW inverter with excellent results—saving a couple of hundred dollars on initial cost and still registering peak output. 3. Equate Load Requirements, Not Panel Watts It's not solely about sunlight—actual usage matters, too.

How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.
