

## EQACC SOLAR

# How big an inverter should I install for 12v400

## Overview

---

The rule of thumb is to size your inverter 1.25 bigger than your solar array. In some cases, you may need to use multiple inverters to meet your power needs or increase your system's voltage. Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How big should a solar inverter be?

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power consumption. You could follow our to make this estimation.

How does the inverter size calculator work?

Our Inverter Size Calculator simplifies this task by accurately estimating the recommended inverter capacity based on your solar panel power and quantity. By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity.

How do I size my inverter?

Ready to size your inverter?

Follow this proven process: Calculate your total panel capacity Count your panels and multiply by their wattage rating. Example: 20 panels × 400 watts = 8,000 watts (8kW) Apply the DC-to-AC ratio Divide your array capacity by your target ratio.
