# How big an inverter should I use for 220V2A

## Overview

---

Before we go any further, we highly recommend that you choose a pure sine wave inverter. This type of inverter delivers high-quality electricity, similar to your utility company. This way, none of your appliance.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

How do I size my inverter?

Ready to size your inverter?

Follow this proven process: Calculate your total panel capacity Count your panels and multiply by their wattage rating. Example: 20 panels  $\times$  400 watts = 8,000 watts (8kW) Apply the DC-to-AC ratio Divide your array capacity by your target ratio.

How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.
