

**EQACC SOLAR**

# **How big is a 1 kilowatt solar container outdoor power**

## Overview

---

What voltage does a solar system work at?

Solar systems typically operate at 12V, 24V, or 48V. Ensure your panels, batteries, and inverter all work together at the same voltage. When in doubt about compatibility, don't hesitate to call us! We're here to help you build a system that works seamlessly. Try different combinations of appliances in the calculator.

What is a solar panel array?

**Solar Panel Array:** This is all your solar panels combined. Its size is measured in watts (W) or kilowatts (kW) and determines how much energy you can generate under peak sunlight. **Battery:** This stores the energy your panels generate for use when the sun isn't shining. Battery size is measured in watt-hours (Wh) or kilowatt-hours (kWh).

How many kWh does a 150W refrigerator use?

**Example:** Our 150W refrigerator running for 8 hours uses 1.2 kWh. **Solar Panel Array:** This is all your solar panels combined. Its size is measured in watts (W) or kilowatts (kW) and determines how much energy you can generate under peak sunlight. **Battery:** This stores the energy your panels generate for use when the sun isn't shining.

Should I get a 6 kW inverter?

For instance, if your current needs require a 4 kW inverter, but you're planning to add a window AC unit (which might need 1.5 kW) and a home office setup (around 0.5 kW), consider getting a 6 kW inverter instead. This gives you room to grow and can be more efficient in the long run.
