

## EQACC SOLAR

# How long does it take to charge the battery at the energy storage cabinet site

## Overview

---

For our home - use battery storage systems, such as the 5kwh Stacked Energy Storage System For Home, with a standard 3kW charger, it may take around 1.5 - 2 hours to charge from 0% to 80% and an additional 1 - 2 hours to reach full charge. What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

How long does a battery energy storage system last?

Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe. Pumped Hydro Storage: In contrast, technologies like pumped hydro can store energy for up to 10 hours.

What is energy storage duration?

When we talk about energy storage duration, we're referring to the time it takes to charge or discharge a unit at maximum power. Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours. This means they can provide energy services at their maximum power capacity for that timeframe.

How can a battery energy storage system help your business?

Using a battery energy storage system alongside power generation technologies such as gas-fired Combined Heat and Power (CHP), standby diesel generation, and UPS systems will provide increased resilience and mitigate potential loss of operational costs, whilst protecting your brand.
