

**EQACC SOLAR**

# **How many hydrogen energy stations are there in Albania**

## Overview

---

How many solar projects are there in Albania?

So far, the solar auctions have produced two PV projects with a total of 240 MW. Albania reports 7 GW of wind and solar potential and is looking into developing offshore wind in the Adriatic Sea. The availability of renewable energy resources in Albania for some renewable energy technologies is less studied than for others.

How many hydropower plants are there in Albania?

Albania is the only country in the Western Balkans to have completed new large hydropower plants in the last decade and as of the end of 2023 it had at least 25 operational hydropower plants of more than 10 MW, as well as countless smaller ones (see Regulator's report).

Does Albania have a potential for renewable resources?

Currently only hydropower makes a significant contribution to the current energy consumption in Albania. However, the country has significant potential for renewable resources in the form of wind, solar and biomass. • How EU directives affect the development of RES?

.

What is the hydro power potential of Albania?

Albania has a considerable hydro power potential, where only 35% of it is utilized. The hydrographic territory of Albania has a surface of 44,000 km<sup>2</sup> or 57% more than the national area of our country. The total reserves are estimated at 4,500 MW and the annual output potential can reach 18 TWh.

## How many hydrogen energy stations are there in Albania

---

### Factsheet: Renewable Energy in Albania

Status of Renewable Energy Deployment  
With 45% of the total primary energy supply (TPES), Albania has one of the largest shares of renewable energy in its energy mix in ...
