

**EQACC SOLAR**

# **How many kilowatts of inverter is suitable for home use**

## Overview

---

What size solar inverter do I Need?

Inverter size is measured in kilowatts (kW). It should match your solar array within a 1.15 to 1.33 ratio. Getting it wrong can reduce efficiency or disqualify you from solar rebates. What size inverter do I need for solar panels?

To calculate, divide your solar panel system's total DC rating by the desired inverter's AC output.

How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.

Do you need a power inverter for a solar power system?

Moreover, power inverters are a vital part of any home solar power system, allowing you to convert solar energy into usable electricity for daily consumption. They are energy-efficient, relatively quiet, and environmentally friendly.

What is a recommended inverter power range?

By inputting your panel's rated power and number of panels, the calculator produces a recommended inverter power range that aligns with 80-100% of your system's total DC capacity. This approach ensures that your inverter is neither under-sized—risking energy losses and performance issues—nor over-sized, which can lead to unnecessary costs.
