Overview

What is a cylindrical lithium ion battery?

Cylindrical lithium-ion battery cells are a type of rechargeable battery commonly used in a wide range of electronic devices, electric vehicles, and energy storage systems. They are characterized by their cylindrical shape, standardized sizes, and high energy density, making them versatile and suitable for various applications.

What is the rated capacity of a lithium battery?

For full lithium utilisation, the cell capacity is 3860 mAh/g of lithium, simply calculated by Faraday's laws. Thus, the actual rated capacity of the cell in mAh is determined by the weight of lithium in the cell.

What are the naming rules for lithium ion batteries?

The naming rules for cylindrical lithium-ion battery cells follows a standardized format based on the cell's dimensions, and usually represented by a five-digit code, where each digit provides specific information about the cell's dimensions. Here's a breakdown of the representation: What does 18650 means?

.

What is a typical lithium ion battery size?

Typical lithium ion battery cell sizes—18650, 21700, and 26650—are named by their dimensions (e.g., 18 mm × 65 mm) and range in capacity from ~1,300 mAh up to 6,800 mAh. Compared to nickel metal hydride and other traditional chemistries, lithium-ion cells typically have a very low self-discharge rate.
