# How many solar modules can be loaded into a container

## Overview

---

The most commonly used shipping container to ship solar panels is the 40-foot standard container. It can be loaded with about 500-600 solar panels, depending upon their size and how they are loaded. How many solar panels can a truckload hold?

These dimensions mean that a full truckload can hold about 26 standard-size pallets or about 45,000 lbs. If 30 solar panels can be loaded on a pallet, that means up to 780 solar panels might encompass a full truckload shipment. Need to move a smaller quantity of solar panels?

You might opt for LTL, short for less than truckload, shipping.

How many solar panels can fit on a pallet?

You can fit between 25-30 solar panels on a pallet. How much does it cost to transport solar panels?

Typical Freight charges for solar panels range from about \$150 to \$400 for 1-24 solar panels, \$400 to \$600 for solar panel pallets depending on destination and if a liftgate is required.

How much does it cost to ship solar panels?

Typical Freight charges for solar panels range from about \$150 to \$400 for 1-24 solar panels, \$400 to \$600 for solar panel pallets depending on destination and if a liftgate is required. What is 40ft HQ container?

.

Can solar panels be stacked horizontally?

Solar panels stacked horizontally without the right separators or cushion can put stress on the panel, leading to microcracks and other damages. From there, the box or crate should be affixed to a shipping pallet. Shipping pallets are basically platforms designed to hold freight during transport and storage.
