

**EQACC SOLAR**

**How many types of translucent  
glass are there for solars**

## Overview

---

What are the different types of solar glass?

There are several different types of solar glass available on the market, each with its own unique characteristics and applications. One common type is transparent solar glass, which allows light to pass through while still generating electricity.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

What are the different types of Photovoltaic Glass?

These three products have entirely different characteristics and functions, leading to significant differences in their added value. Currently, the most widely used photovoltaic glass is high-transparency glass, known as low-iron glass or extra-clear glass. Iron in ordinary glass, excluding heat-absorbing glass, is considered an impurity.

What is solar glass?

Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it to generate power from sunlight. This innovative technology has gained popularity in recent years as a sustainable and efficient way to produce clean energy.

## How many types of translucent glass are there for solars
