How many watts of solar power does Japan generate

Overview

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

How much solar energy does Japan produce in 2022?

In 2022, Japan produced 4,956 TWh of energy. Assuming energy consumption remains relatively stable, renewable energy capacity will need to grow to 1,784 TWh by 2030. This growth relies on better government policy to incentivise renewable energy and grid infrastructure investment. Why Is Solar Power So Popular in Japan?

.

Does Japan need solar energy?

This will need to dramatically increase for Japan to stay aligned with its renewable energy and decarbonisation goals. Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals.

Is solar energy the future of Japan's Energy Strategy?

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality by 2050 with an interim goal of 36-38% of energy from renewables by 2030.
