

# How much does an outdoor power battery cost per kilowatt-hour

## Overview

---

How much does a battery cost per kWh?

Battery cost per kilowatt-hour (kWh) refers to the cost to manufacture or purchase one unit of energy storage. If a battery costs \$120 per kWh and has a 10 kWh capacity, it would cost approximately \$1,200. This metric helps compare pricing across different battery technologies and sizes. Why is \$100 per kWh considered a critical threshold?

How much will a battery cost per kWh be in 2030?

BloombergNEF and McKinsey forecast that by 2030, the average battery cost per kWh could dip below \$70, unlocking mass affordability for EVs, energy storage, and smart grids. Battery cost per kWh has become a cornerstone metric in the global shift toward electrification and renewable energy.

How much does a battery cost?

Today, the average battery cost sits around \$120 per kWh, with leading manufacturers achieving sub-\$100 prices for large orders. LFP battery technology and Chinese manufacturing have played major roles in this shift. Experts forecast costs could fall below \$70 per kWh by 2030, especially if solid-state technology becomes viable.

Which battery has the lowest cost per kWh?

As of 2025, Lithium Iron Phosphate (LFP) batteries tend to have the lowest cost per kWh, thanks to cheaper raw materials and simpler manufacturing. While they offer slightly lower energy density, they are safer and longer-lasting.
