# **How much solar energy storage does Iran have**

## Overview

---

How much solar power does Iran have?

Iran has an average of 2,200 kilowatt-hour solar radiation per square meter annually, and 90% of the country has enough sun to generate solar power 300 days a year. In 2020 there were just over 300 MW of wind power, less than 1% of installed capacity.

Can solar energy be used in different regions of Iran?

The use of solar energy in different regions of Iran is practicable. In fact, the establishment of solar power plants has been studied and is underway in several cities, including Tehran, Yazd, Semnan, and Shiraz. Currently, a 250 KW power plant in Shiraz and a 1,000 KW power plant in Tehran are under construction.

How much energy does Iran's peak demand require?

According to an Iranian Ministry of Energy presentation, peak demand of the system is forecast to grow from 37,053 MW in FY 2007-08 to 88,166 MW by FY 2020-21. This growth is initially projected at 8-9% per year and later tapering off to 5%.

How much oil does Iran have in storage?

Iran has as much as 80 million barrels of oil in storage, he said, some of it on tankers near Asian markets, ready to sell at short notice. Tehran could then ramp up domestic production by 1.2 million barrels a day within eight months, bringing substantial new supplies to the market.
