How to replace the lead-acid battery of the base station

Overview

How do I replace a lead-acid low voltage battery?

Perform the following procedure to replace the lead-acid low voltage battery. Wear appropriate personal protection equipment (such as safety glasses, leather gloves when handling the lead-acid battery etc.). Removal: Ensure the vehicle is in Park. Lower all windows. Open the front trunk.

Why is my lead acid battery charging directly from my alternator?

If your lead acid battery was charging directly from your car's alternator, you need to make some changes. Lithium batteries have a low internal resistance. It will demand as much current from the alternator as it can handle, leading to overheating or even burning out of your alternator. Victron did a great video about this:.

Can you change a battery to lithium?

You need to consider some items while changing your batteries to lithium. But it is surely doable if you keep these points in mind. Always use insulated tools when working on batteries and wear safety glasses. Your old lead-acid battery should be recycled in your local center.

What is the difference between a lithium battery and a lead-acid battery?

Read my article about lead-acid VS lithium here. A lead-acid battery has a 3 stage charging profile, while a lithium battery has only one. The voltage also differs between the two. That's why you need a charge controller that can be manually programmed or changed to a lithium setting.

How to replace the lead-acid battery of the base station

Replace lead acid battery with lithium

Reasons for using lithium batteries (lithium iron phosphate batteries) instead of lead-acid batteries 1. Lithium iron phosphate ...
