# **How to test the quality of batteries in the battery cabinet**

## Overview

---

How do you test a lithium battery?

By testing lithium batteries you ensure the reliable and safe operation of batteries. Whether you're dealing with testing complete lithium-ion batteries or raw lithium-ion cells, thorough testing is essential to assess their condition, capacity, and overall health. [How Do I Test A Battery?](#)

Visual Inspection: The first step is a visual Inspection.

Why is battery testing important?

Battery testing guarantees safety, reliability, and performance in different applications. If not tested, batteries may fail, overheat, or have a shortened lifespan. This manual provides critical testing steps to avoid such failures.

What are the steps in battery testing?

The steps in battery testing involve a visual inspection for physical damage, a voltage check to make sure the battery is within a normal operating range, a capacity test to compare current capacity to rated capacity, and an internal resistance test to assess the battery's overall health.

What is battery testing?

Battery testing is a set of controlled tests that evaluate a battery's performance, capacity, safety, and life expectancy. It informs manufacturers, researchers, and users about battery behavior under a wide range of environmental, electrical, and mechanical conditions. ### Efficient Higher Revenue

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Overvoltage
- Max. PV Input Current 15A, Compatible with High Power Modules

### Intelligent Simple O&M

- IP65 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

### Flexible Abundant Configuration

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 Units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
