Industrial energy storage costs

Overview

How much does the energy storage system cost?

The energy storage system is a 4MW, 32MWh NaS battery consisting of 80 modules, each weighing 3 600 kg. The total cost of the battery system was USD 25 million and included USD 10 million for construction of the building to house the batteries (built by Burns & McDonnell) and the new substation at Alamito Creek.

How much does thermal energy storage cost?

Materials for sensible thermal energy storage in the range of 15–200 °C were considered and presented by Fernandez et al. Commercial prices vary from 0.02 to 0.08 €/kg for standard concrete, from 0.15 to 0.25 €/kg for high density concrete, from 0.1 to 0.3 €/kg for common mineral powders, and from 0.5 to 3 €/kg for steel and alloys.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

What is the energy storage Grand Challenge?

The U.S. Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate the development, commercialization, and utilization of next-generation energy storage technologies.

Industrial energy storage costs

Energy Storage Cost and Performance Database

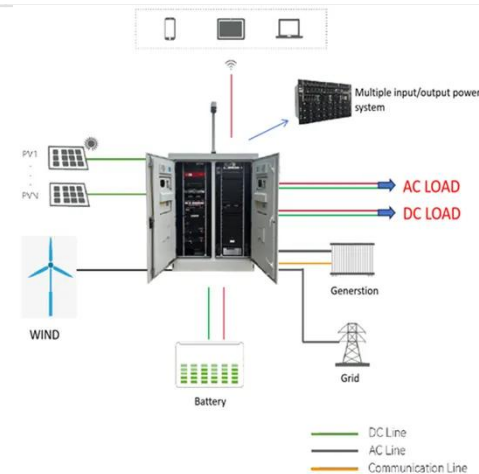

The U.S. Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate the development, commercialization, and utilization of next ...
