**Install solar panels on both
sides of the roof**

Overview

How do you install solar panels on a roof?

Installing solar panels aligned with the plane of the roof and located on a roof plane not visible from public areas. Installing solar panels where they may be visible from public areas or have an impact on significance. Locating solar devices to avoid visual impacts resulting from their location, scale, form, colours and reflectivity.

Can solar panels be installed vertically across a roof?

It's possible to maintain a longer row of solar panels when you install them vertically across your roof. So not only are you able to fit more into place, you're not adding as many steel bolts into your roof rafters. Still, you can install solar panels securely.

Can solar panels be installed on a flat roof?

However, when the roof is not angled to the latitude you can install your panels to the tilt of the roof. If you install your panels on a flat roof, you will need a mount to provide an angle of 10 degrees tilt for the panels to provide power optimally. Where you live also determines the ideal solar panel angle.

Can solar panels be installed on a tiled roof?

Solar panels can be installed on a tiled roof in three ways: by installing solar tiles directly onto the roof or by attaching panels using mounting brackets. Most people install solar systems on their existing houses ('retrofit') using this method.
