**Integrated energy combined
with energy storage microgrid**

Overview

What is a multi microgrid integrated energy system framework?

A multi microgrid integrated energy system framework considering hybrid energy storage operator (HESO) is proposed. It can improve the energy utilization efficiency of the system, reduce the construction cost of energy storage equipment and protect the information security of users.

Can hybrid energy storage be used in a large-building microgrid?

With the aims of constructing zero-energy buildings with an improved power quality and accelerating the transition to a higher-quality power supply system in mind, this study applied hybrid energy storage technology within the IES in a large-building microgrid. Its main conclusions are as follows::

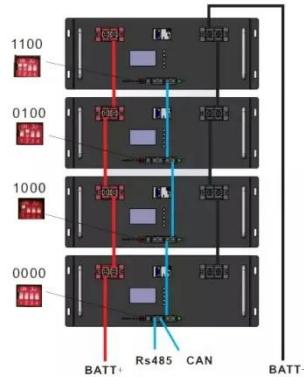

Can a multi energy storage system be used in a microgrid?

In order to absorb renewable energy and enhance the flexibility of the microgrid, we have introduced an energy storage system that can be used for multi energy storage in the microgrid.

How does the configuration of energy storage systems affect a microgrid?

(1) The configuration of energy storage systems in a microgrid can affect the investment cost of energy storage systems, as well as the operating and pollution control costs of the entire microgrid. As a constraint in system operation, it affects the selection of power allocation strategies for the entire microgrid.
