

**EQACC SOLAR**

# **Inverter comes with battery**

## Overview

---

### Do inverters need batteries?

For most residential and small commercial setups, the traditional battery and power inverter combo is the preferred choice to ensure continuous power supply during blackouts. So, while some inverter types do not require batteries, if your priority is uninterrupted backup power, investing in a quality battery in inverter system is essential.

### What kind of batteries do inverters use?

Its modular and stackable battery packs provide the storage alone but are "inverter agnostic," which is the industry's way of saying they work with anyone. Its most popular battery is the 3.8 kWh battery module, which can be stacked and nestled next to your inverter on the wall next to your electrical panel.

### What is an inverter battery?

An inverter battery is a specially designed energy storage solution that powers an inverter during electricity outages. Unlike automotive or starter batteries—which provide short bursts of high current to start engines—inverter batteries are built for deep-cycle performance, meaning they release a steady amount of energy over a longer duration.

### How to choose an inverter that has a battery?

Choosing a good inverter that has a battery for your home is a crucial process. To ensure that your battery of the inverter performs optimally and reliably, you need to consider multiple factors. • **Power Needs:** Calculate the total wattage of the appliance that you want to be operated on blackout.
