**Inverter that can charge the battery**

## Overview

---

Can a power inverter charge a battery?

This inverter cannot charge batteries it only uses the battery. The inverter is widely used in business travel, sailing trip, to provide AC 220V power for various electrical equipment, it is also widely 1000W Power Inverter 12V.

What is the difference between solar power and inverter charging?

The only difference is the setting on your charging controller, which we will start to review now. Solar power is the most common way to charge your battery while connected to an inverter. It acts as a battery charger that provides constant voltage to keep your battery charging.

How do you charge a battery with a solar inverter?

discharge the batteries using the inverter. If you are charging the batteries, you must be connected to a generator or an AC load to have a source of power to charge the batteries. This works separately from the MPPT, which will also charge the batteries if the MPPT/solar supplies power to the inverter.
