Irish energy storage power station solution

Overview

How much energy storage does Ireland have?

Image: ESB. ESB Networks has announced that Ireland's electricity grid now has 1GW of energy storage available from different energy storage assets. This figure includes 731.5MW of battery energy storage system (BESS) projects and 292MW from Turlough Hill pumped storage power station - which is celebrating its 50th anniversary this year.

Are battery energy storage systems a 'great achievement' in Ireland?

ESB Networks described the project as a “great achievement for battery storage” in Ireland. Battery energy storage systems, often referred to as Bess, are regarded as a vital part of the Ireland's fledgling renewable energy sector and demand for them has never been higher.

What can ESB do for Ireland's Electricity System?

Large-scale battery energy storage projects and Turlough Hill pumped storage power station combine to reach milestone that can help to provide flexibility and support more renewables on Ireland's electricity system. Today, ESB Networks has announced that it has 1,000 MW (one Giga Watt) of electricity storage connected to Ireland's network.

How does electricity storage work in Ireland?

For context, peak demand on Ireland's electricity system is approximately 5.5 GW. Electricity storage systems such as utility-scale battery projects also provide essential backup services to the grid that help to keep the electricity supply secure, reduces carbon emissions and ultimately reduces costs to the consumer.
