

**EQACC SOLAR**

# **Is 30A normal for 800W solar charging**

## Overview

---

Do I need a 20A charge controller for an 800W solar array?

For an 800W solar array with a 48V battery bank, a 20A MPPT charge controller would be the minimum requirement (since  $800W \div 48V \approx 16.6A$ ). However, 20A 48V controllers are relatively uncommon in the market.

Do I need a charge controller for a 1000W solar array?

For your 1000W solar array on a 48V system, you need a 25.0A MPPT charge controller. This MPPT controller will harvest approximately 100W more power compared to a PWM controller. A solar charge controller regulates voltage and current from solar panels to batteries, preventing overcharging and maximizing efficiency.

Which charge controller is best for an 800W solar array?

For an 800W solar array, an MPPT charge controller is clearly superior due to its advanced working principle and higher efficiency (up to 99%).

Can a 240W solar array charge a 12V battery bank?

For a 240W 12 V solar array to charge a 12V battery bank ( $240W/12V = 20A$ ) a 20 amp PWM Charge controller is required. It is imperative that the voltage of the solar array matches the charge voltage of the battery bank with PWM-type controllers. PWM controllers are not as complex or expensive as MPPT controllers.

## Is 30A normal for 800W solar charging

### What Size Charge Controller You Need (Calculated)

What Type and Size Charge Controller to SelectSelect Correct Mppt AmpTypical Mppt Amperage SizesLarge solar arrays can generate power, but the MPPT controller will limit the output. It would be inefficient to have panels delivering 80 A of current to an MPPT controller with a 40 A output current rating. In this example, it would be better to have two 40 A MPPT controllers controlling the 80 A input current from the solar panels. The input vol See more on solvoltaics RenewableWise
