

**EQACC SOLAR**

# **Is it good to install solar panels on the new roof**

## Overview

---

Can you install solar panels and a new roof at the same time?

When you install solar panels and a new roof at the same time, it's very unlikely you'll need to re-roof during your system's lifetime. Solar panels are more durable than most roofing materials and can extend the life of the roof shingles they cover. Replacing your roof and installing solar panels will probably cost about \$30,000.

Why do you need a new roof & solar panel installation?

Streamlined process: Combining roof replacement and solar panel installation into a single project simplifies logistics and reduces overall disruption to the household. Optimal system integration: A new roof ensures proper fitting and sealing of solar panel mounts, reducing the risk of leaks or structural issues.

When should I replace my roof if I have solar panels?

If your roof is 10 to 20 years old, you will most likely need to replace your roof at some point in the lifetime of your solar panels if you install them now, so expect to spend a few thousand dollars more when that time comes.

Should you replace your roof if you have a solar system?

Ty Sauer, a development manager with the RES Group, a large independent renewable energy company, explained to us that "for a newer build home of less than five years, there is minimal concern of replacing the roof" during the lifetime of a solar panel system.
