

EQACC SOLAR

**Is it reliable for
telecommunications companies
to build base stations**

Overview

Why do we need a base station?

Base stations not only enable today's communication, but also pave the way for tomorrow's networks—supporting higher speeds, lower latency, and new services. At EverExceed, we power this connectivity with advanced energy solutions tailored for telecom base stations, from lithium batteries to stacked solar systems.

What is a telecom base station?

From making a phone call in a busy city to streaming videos in remote villages, the ability to stay connected relies on one critical piece of infrastructure: the telecom base station. Often hidden in plain sight on rooftops or towers, base stations are the backbone of modern mobile networks. **What Is a Base Station?**

Why are telecom companies installing indoor 5G base stations?

To solve this, telecom companies are installing indoor 5G base stations, which are growing at a compound annual growth rate (CAGR) of over 30%. For businesses operating in offices, malls, or large commercial spaces, installing indoor 5G solutions can greatly enhance connectivity.

Why do cities need more base stations than 4G?

In urban environments, this means installing 10 times more base stations per square kilometer compared to 4G. This presents both opportunities and challenges. On one hand, denser networks lead to better speeds and connectivity. On the other hand, deploying this many base stations requires significant investment and regulatory approvals.
