

**EQACC SOLAR**

**Is outdoor power fast charging  
good**

## Overview

---

Is fast charging better than slow charging?

For preserving battery health, slow charging is the better option. However, if you're in a hurry and need a quick power boost, fast charging is more practical. Does fast charging drain the battery faster?

No, fast charging does not drain the battery faster. It simply delivers more current to charge the battery quickly.

Why is fast charging a good idea?

Advances in battery technology mean today's fast chargers are more efficient and safer than ever before. Some even come with smart features to prevent overheating or overcharging. Fast charging may reduce the long-term lifespan of your battery. Why?

Because: Heat is generated during fast charging, and heat speeds up battery wear.

Does fast charging affect battery life?

Yes, fast charging can affect battery life, but the extent of the impact depends on how it's used. While fast charging is incredibly convenient, it generates heat and places stress on the battery, which can lead to long-term wear. Let's dive into the key factors behind this and how they influence battery health:.

How much power does a fast charging device need?

To qualify as "fast charging," the charger typically needs to deliver at least 50 watts of power. That translates to voltage and current values like 400V and 125A ( $400 \times 125 = 50,000$  W). On smaller devices like smartphones, fast charging often involves delivering power at 5V, 9V, or 12V, with amperage around 2A (2000mA).
