

# Is the inverter for Saudi Arabia's solar container communication station connected to the grid

## Overview

---

Will Saudi Arabia build a high voltage power grid?

Saudi Arabia is building a high voltage power grid for Neom, the city that is expected to be issued a tender for its technical design later this year. Neom will be built along Saudi Arabia's borders with Jordan and just across the narrow Strait of Aqaba from Egypt's Sinai Peninsula by the end of the first quarter of 2026.

What is a solar inverter?

A solar inverter is an integral component of the solar electric power system responsible for inverting energy from direct current (DC) to alternating current (AC). Different types of solar power inverters might be used depending on a solar system's varying requirements. A solar inverter converts DC power from solar panels into AC power that can be used by your home or business.

What are the two main types of solar inverters?

Broadly, there are two main types of solar inverters:

- Microinverters have a higher upfront cost but can provide long-term savings by being exceedingly energy efficient.
- String inverters are primarily used to save upfront system costs.
