# Is there a universal inverter for 12v and 48v

## Overview

---

Do I need a 12V or 48V inverter?

Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power. Inverter Chargers handle this function plus allow you to charge your batteries off shore power or a generator. Renogy's 3500W Solar Inverter Charger is designed for a 48V system.

Do 48V power inverters work?

48V power inverters work perfectly in 48V solar systems, which are usually either small commercial or large residential. These inverters are typically paired with 48V PV modules and batteries of a comparable voltage.

How many power outlets does a power inverter have?

The number of power outlets: Power Inverters are available with single outlets to power one device and multiple outlets (two or three outlets) to power multiple devices simultaneously. You need to decide the number of power outlets you would require.

Can a 48 volt inverter run a battery?

When you use a 48-Volts inverter, you can use regular and more flexible connectors to connect the inverter to the battery bank. This is so because the thinner the wire, the higher the resistance. And if your DC voltage is lower, you will pass more current through the wires, and they can get very hot, and you lose a lot of battery power.
