## Overview

What are the parts of a wind turbine?

The wind turbine itself consists of the main tower, its three blades, and the nacelle. Inside the nacelle and the tower base are housed the various electrical and electronic parts necessary for the efficient and safe conversion of wind power to electrical energy. These include the power controls (pitch and yaw), the generator, and the.

What will we find inside the top part of a wind turbine?

Learn more about our services: What will we find inside the top part of the wind turbine?

When we reach the top of the wind turbine, we find ourselves in the so-called nacelle, which is an enclosed cabin at the top of the tower, housing most of the key mechanisms of the entire installation. This includes the generator, gearbox, and control systems.

How does a wind turbine work?

A small anemometer and wind vane on top of the wind turbine electronically tell a controller which way to point the rotor into the wind. Then the "yaw drive" mechanism turns gears to point the rotor into the wind. Maintenance Hoist. Generator: 800 kW, Induction, 4 poles, 690 Volts. Top Control unit.

What is a wind turbine electrical system?

To accomplish this, typical wind turbine s electrical system comprises a series of subsystems as shown in Figure 17. energy. However, since it has to face highly fluctuating torque load, supplied by the wind turbine rotor, it is significantly different from other generators used in electrical grids.
