

## EQACC SOLAR

**It is planned to prohibit solar  
container outdoor power within  
50 meters**

## Overview

---

Are state and local ordinances limiting PV solar deployment?

While state and local ordinances for PV solar have the potential to be highly constraining to future deployment, they have not materialized to date. And while many ordinances restricting PV solar are being adopted nationwide, the degree of restriction imposed by such ordinances is generally minimal.

How can ePowerControl ZE reduce solar energy loss?

By default, excess solar energy is clipped by an injection limiter. A more economical approach, in which an intelligent energy management system such as ePowerControl ZE is deployed, would optimize the amount of energy lost by clipping the right amount of solar-generated power.

Can solar energy be used for self-consumption?

The use of solar energy for self-consumption has many advantages: reducing a site's carbon footprint, the decrease in energy costs, or the possibility of reselling this energy to the national grid when local regulations allow it.

How many states have solar ordinances?

There is also one state with solar ordinances, Vermont, which has 14 counties, and if included would mean 296 counties have a solar ordinance, or still 9 percent of U.S. counties.
