It is strictly forbidden to use inferior solar container lithium battery packs

Overview

Are lithium batteries safe to transport in 2025?

Transporting lithium batteries safely has become a global priority. You must understand the regulations governing this process in 2025 to prevent risks and ensure compliance. Over 40 air transport incidents involving lithium batteries have occurred since 1991, with 21 on passenger aircraft.

How are lithium ion batteries packed?

This applies for both lithium-ion cells and batteries and lithium metal cell and batteries. E.11 I have lithium-ion batteries packed with equipment (PI 966, Section I) where the lithium ion batteries are packed in a UN specification fibreboard (4G) box and then that box is packed with the equipment in a fibreboard outer packaging.

Are lithium batteries a hazardous material?

Effective control of lithium battery transportation is essential to ensure safety and compliance with global shipping regulations. Lithium batteries are classified as Class 9 hazardous materials under the Hazardous Materials Regulations (HMR).

Do lithium batteries need to be labeled?

Except for containerized lithium-ion battery energy storage systems and vehicles powered by lithium batteries (pure electric or hybrid), each package containing lithium batteries must be labeled with the correct shipping name and the corresponding UN number prefixed with the letters "UN."
