

**EQACC SOLAR**

# **Lesotho Energy Storage Container 50kW**

## Overview

---

How much energy does Lesotho consume in a year?

Lesotho consumes 501 m kWh of electric energy per year. Per capita, this amounts to an average of 400 kWh. Lesotho can partly be self-sufficient with domestically produced energy, as the total production of all electric energy producing facilities is 501 m kWh, which is 55 percent of the country's own usage. The rest of the needed energy is imported from foreign countries.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What energy storage container solutions does SCU offer?

SCU provides 500kwh to 2mwh energy storage container solutions. Power up your business with reliable energy solutions. Say goodbye to high energy costs and hello to smarter solutions with us.
