

EQACC SOLAR

Libya energy storage direction

Overview

Why does Libya need a solar power system?

Since most of Libya's hydropower is off-river, there is a need for substantial storage to support the solar-based energy system. Off-river Pumped Hydro impacts compared to on-river hydropower storage. In a mature and competitive market, solar PV has clear economic advantages over fossil fuels and hydropower.

What energy resources does Libya have?

In addition to its fossil energy resources, Libya possesses favourable conditions for solar, wind, and moderate hydroelectric energy. The solar energy potential alone energy consumption similar to developed countries for all Libyan citizens, without relying on fossil fuels. hydropower storage.

What is the storage capacity of a well in Libya?

identifies around 280 well sites in Libya with a total storage capacity of 50 TWh (Fig. 8). To provide some ranging from 75% of the average in winter to 125% in spring (Nassar et al., 2023b). This implies a need for substantial seasonal storage. A suggested upper limit for seasonal storage is 50 TWh, which can be achieved.

Can Libya achieve energy self-sufficiency?

This shift towards renewable electrification of energy services, such as transportation, heating, and industry, will gradually replace fossil fuels in the coming decades. This paper highlights Libya's potential to achieve energy self-sufficiency in the twenty-first century.
