Luxembourg UPS uninterruptible power supply equipment specifications

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) are backup batteries that provide emergency power to electrical systems in case power becomes unavailable. They are connected between a power source (such as an electrical outlet) and the equipment to protect (such as a motor or computer).

What is an industrial network uninterruptible power supply (UPS)?

ET Industrial Network Uninterruptible Power Supply (UPS) SPECIFICATIONS
The Uninterruptible Power Supply (UPS) shall be powered by 24VDC (nominal) input and provide 24VDC (nominal) output at 100 Watts (max.) for a duration of 1.0 minutes, typ. Ultracapacitors shall be employed for energy storage.

What is a three-phase uninterruptible power supply (UPS)?

Three-phase uninterruptible power supplies (UPS) operate in conjunction with existing electrical systems to provide power conditioning, back-up protection, and distribution for electronic equipment loads that use three-phase power. DC uninterruptible power supplies are designed specifically for DC systems.

Why is a battery important for an UPS system?

UPS STATIC UNINTERRUPTIBLE POWER SUPPLIES TECHNICAL GUIDE 17
CONTENTS WWW.LEGRAND.COM Batteries are essential for the UPS system: they ensure continuity of power supply by providing energy to the inverter (for the required period) when there is no power supply. It is therefore essential that they are always connected, functioning, and charged.
