# **Main breaker switch for sale in Australia**

## Overview

---

What is the difference between a main switch and a circuit breaker?

A main switch (or isolator) is designed purely to switch power on and off manually—it does not provide overcurrent protection. A circuit breaker automatically trips during overload or fault conditions to protect circuits. Main switches are used for isolation during maintenance and servicing, allowing electricians to safely de-energise circuits.

What is a circuit breaker used for?

A circuit breaker automatically trips during overload or fault conditions to protect circuits. Main switches are used for isolation during maintenance and servicing, allowing electricians to safely de-energise circuits. Circuit breakers protect against electrical faults but aren't designed for frequent switching operations.

What is a single pole main switch?

This is to ensure reliability in all applications where isolation of circuits is required. This single pole main switch is rated at 100amps 240V AC. It's features include 18mm width per pole, ON/OFF indicators and 35mm DIN rail mounting. It will take up to 25mm<sup>2</sup> cable and has a lockable toggle. Available in 1 and 3 pole in 63, 80 and 100amps.

What is a main switch?

Main switches are electrical isolator devices that disconnect entire installations or circuits from power supply. Available in 80A-100A ratings with single-pole, double-pole, or three-pole configurations, they enable safe maintenance isolation, emergency disconnection, and comply with AS/NZS 3000:2018 Australian standards.

## Main breaker switch for sale in Australia

### Australia's Leading Wholesaler Of 1 Pole & 3 Pole Main Switches ...

1 Pole & 3 Pole Main Switches (ALL BRANDS) for Sale in Australia. Full Range of High Quality Australian Made 1 Pole & 3 Pole Main Switches (ALL BRANDS).
