Mauritania solar container communication station wind and solar complementary solution

Overview

In a significant step towards energy transition, Mauritania signed a public-private partnership agreement worth \$300 million on Friday, September 12, in Nouakchott to construct a hybrid power plant that combines solar and wind energy—the first of its kind in the country. What is Mauritania doing now?

Mauritania has just inked its first independent power producer contract which is a \$300 million agreement that was signed with Iwa Green Energy that will foresee the development of the 60-megawatt Mauritania Hybrid Solar-Wind Plant. Furthermore, the renewable energy project marks a milestone in Mauritania.

Why should Mauritania invest in wind & solar energy?

Mauritania has high-quality wind and solar resources whose large-scale development could have catalytic effects in supporting the country to deliver universal electricity access to its citizens and achieve its vision for sustainable economic development.

How will Mauritania's new solar power project help agri-food industry?

The project will provide rural electrification for 40 localities in south-eastern Mauritania, through the installation of hybrid mini photovoltaic power plants and the construction of connecting lines. The project will also support value-creating activities, especially in the food cold chain and agri-food processing.

What is the development potential of Mauritania?

d power development in Mauritania. The maximum development potential across the country is estimated at approximately 457.9 GW and 47 GW for solar PV and wind projects, respectively, considering land-use footprints of 50 MW/km² for solar PV and 5 MW/km² for wind, wi
