Minimum service life of uninterruptible power supply

Overview

How long does an uninterruptible power supply last?

Like all other IT equipment, an uninterruptible power supply (UPS) has a finite lifespan. The average expected lifecycle of a UPS is eight-to-ten years. The batteries typically need to be replaced at least three times during that lifespan. Of course, once a UPS reaches the end of its lifespan, it should be replaced to mitigate downtime.

What is the life of a UPS (uninterruptible power supplies) unit?

1. What is the lifespan and service life of a UPS (Uninterruptible Power Supplies) unit?

Although it depends on the environment in which the UPS is used, it is generally said to last between 5 and 15 years. This also varies depending on the size, so please see the table below for details.

What are uninterruptible power supply standards?

Uninterruptible power supply standards are established technical frameworks that define the minimum acceptable levels of safety, functionality, and efficiency for UPS systems. These standards are not arbitrary they are the result of decades of research, development, and practical field data gathered by industry experts, scientists, and engineers.

How do you choose an uninterruptible power supply?

When choosing a uninterruptible power supply, IT teams can evaluate two criteria. One is the life of the unit itself – up to ten years. The second consideration is batteries. Every UPS unit has a battery, which as mentioned, must be replaced up to three times.
