

**EQACC SOLAR**

# **Namibia solar Power Generation System**

## Overview

---

Does Namibia have solar power?

The southern region of Namibia experiences -on average- 11 hours of sunshine/day, and an average direct solar radiation of 3000 kWh/m<sup>2</sup>/year . With these conditions, Namibia has a huge potential for installing solar water heaters, solar photovoltaic (PV) systems, and concentrated solar power (CSP) plants .

What are the applications of solar power in Namibia?

Namibia's most common PV technology application is solar PV-based pumping, which is mainly used in cattle farms . Secondary solar applications in the country would be rural electrification, powering radios, lighting, TVs, and fans .

Where does Namibia's electricity come from?

28% of Namibia's generated electricity come from fossil fuels, while 64% are from hydropower, and about 8% come from renewables . Non-electricity off-grid renewable energy projects include the small/ micro wind energy installations used for water pumping, which are very common in Namibia, especially on farms.

Why should Namibia invest in a mega solar project?

This mega solar project will support Namibia's efforts to enhance its renewable energy infrastructure and is expected to greatly contribute to the country's general electricity supply security and also its sustainability goals.

## Namibia solar Power Generation System
