# New energy storage station charging pile

## Overview

---

What is the 'charging pile'?

The State Grid Shanghai Electric Power Company (hereinafter referred to as "State Grid Shanghai Electric Power") has identified the "charging pile" as a breakthrough point and focused on playing the first mover in "new energy vehicles using new energy electricity".

What is the difference between charging pile and charging stations?

1.Charging pile refers to a charging device with a charging gun and a human-machine interface, which is simply an electrical device that can be charged, either in one piece or in a split type.

What are 'green charging piles' in Shanghai?

Up to now, the "green charging piles" in Shanghai have covered multiple business scenarios such as bus dedicated charging stations, fast charging stations for new energy vehicles, commercial building public charging stations, airport charging stations, etc.

Are charging piles the future of smart energy?

Domestically, the charging pile industry is evolving from a simple energy supply facility into a critical node in the smart energy ecosystem. With the maturation of technologies like V2G and distributed energy, charging piles will become a key component of future smart grids.
